# Memory Profile

## 2 1 Scope

3 The DCIM Memory Profile describes the properties and interfaces for executing system management  
4 tasks related to the management of memories (DIMMs) within a system. The profile standardizes and  
5 aggregates the description for the memory properties into a memory view representation as well as  
6 provides static methodology for the clients to query the memory views without substantial traversal of the  
7 model.

92 The Dell Memory Profile is a component profile that contains the Dell specific implementation  
93 requirements for memory view.

94 DCIM\_MemoryView shall be the Central Class.

95 Table 1 identifies profiles that are related to this profile.

96 **Table 1 – Related Profiles**

Profile Name	Organization	Version	Relationship
Profile Registration	DCIM	1.0	Reference

97    **6 Description**

98    The Dell Memory Profile describes platform's physical memory. Each DIMM's information is represented  
99    by an instance of DCIM\_MemoryView class.

100    Figure 1 details the class diagram of the Dell Memory Profile.

101

102

**Figure 1 – Class Diagram**

103    Figure 2 details typical Dell Memory Profile implementation for a platform containing two DIMMs. In order  
 104    for client to discover the instrumentation's support of this profile, MemoryProfile is instantiated in the  
 105    Interop Namespace. MemoryProfile instance describes the information about the implemented profile:  
 106    most importantly, the name and version of the profile and the organization name that produced the profile.  
 107    Memory1 and memory2 are the memory views representing the two memories in the Implementation  
 108    Namespace. They are associated to the Interop namespace's MemoryProfile instance.
