Executive Summary

This technical white paper discusses the implementation of Web Services Eventing (WS-Eventing) for hardware inventory change events and hardware monitoring notification events. The white paper aims to describe the indication management infrastructure for managed hardware in a server.

1 Introduction

WS-MAN is a standard based protocol defined by DMTF used by systems management consoles. WS-MAN provides methods for inventoring, monitoring and controlling system devices. WS-MAN specification also defines a protocol for incident management. Web Services-Eventing (WS-Eventing) defines a protocol for a console (subscriber) to register interest (subscription) with a server web service (event source) in receiving the messages containing the server's events (notifications or event messages). Clients or consoles interested in receiving the WS-Eventing from a WS-Man implementation can subscribe for the hardware inventory changes (additions and removals) and hardware monitoring (power change, OS boot) notifications. WS-Eventing is a powerful tool in managing the system asynchronously, wherein a script developer can take actions on certain subscribed incidents. For example, a workflow can be written to monitor a sensor and if the sensor reading goes over a threshold value, a server restart must be performed. This can be performed by polling the sensor or by subscribing to the events and waiting for the event to occurr.

2 WS-Eventing on iDRAC

This white paper is an extension to the existing WS-Eventing behavior for LifeCycle JobAlert Indications and covers the hardware notification part of eventing mechanism. WS-Eventing for LifeCycleJobAlert Indications white paper has to be referred for the following: For information on

- Prerequisites to Enable WS-Eventing on iDRAC
- Create Event Subscriptions
 - o Event Sink
 - o Expiry time
 - o Subscription Identifier
- Renew Subscription
- Deleting Subscription

3 Enabling alerts

To globally enable or disable the alerts, clients can use the DCIM_iDRACCardService.ApplyAttributes() or DCIM_iDRACCardService.SetAttribute() method from the DCIM iDRAC Card Profile. You can send a request for the following form to globally enable the Alerts.

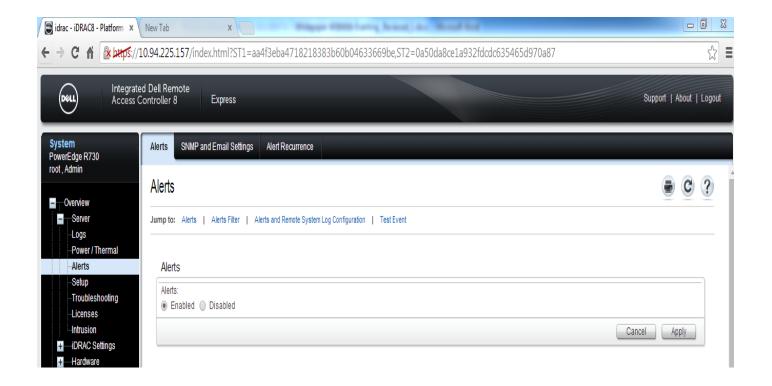

Figure 1 SOAP Request for ApplyAttributes

     </n1:ApplyAttributes_INPUT>
   </s:Body>
  </s:Envelope>
```

Users can also log in to iDRAC Web interface and go to the Alerts page to enable the alerts.

Figure 2 iDRAC Web GUI—Alerts Page

Enabling WS-Eventing Alerts on iDRAC

You can enable the WS-Eventing notification using the following:

DCIM_EFConfigurationService.SetEventFilterByInstanceIDs() or DCIM_EFConfigurationService. SetEventFilterByCategory() method from the DCIM Event Filter profile [0]. You can send a request of the following form to enable the WS-Eventing notification.

     </n1:SetEventFilterByInstanceIDs_INPUT>
   </s:Body>
 </s:Envelope>
```

Users can also log in to iDRAC Web interface and navigate to Configuration category and filter the required events

Figure 4 iDRAC Web GUI WS-Eventing Notification

4 Hardware inventory change and hardware monitoring notification events

iDRAC generates notifications for hardware inventory change events and hardware monitoring . You can subscribe to the following:

• DCIM_AlertIndication – Hardware inventory change events and hardware monitoring notification events

Following subscription is for receiving all events of type DCIM_AlertIndication

The filter specified "SELECT * FROM DCIM_AlertIndication" is a query that filters the iDRAC8-generated events.

4.1.1 Subscription response at event sink

```

5 Examples commands using openwsman client and DCIM_AlertIndication output

Source for the WS-Man client can be found at

http://sourceforge.net/projects/openwsman/files/wsmancli/. Users can download this source, compile, and then install it on a UNIX-based operating system to send the WS-Man commands. The following are examples for sending WS-Man commands related to WS-Eventing.

Enabling Alerts

```
wsman invoke -a ApplyAttributes -h [idrac-ip] -P 443 -u [username] -p [password] -N
root/dcim
http://schemas.dmtf.org/wbem/wscim/1/cimschema/
2/root/dcim/DCIM_iDRACCardService?CreationClassName="DCIM_iDRACCardService",Nam
e="DCIM:iDRACCardService",SystemCreationClassName="DCIM_ComputerSystem",SystemName=
"D
CIM:ComputerSystem" -k Target=iDRAC.Embedded.1 -k
AttributeName=IPMILan.1#AlertEnable -k
AttributeValue=Enabled -V -v -R -o -m 256 -c dummy
```

Enabling WS-Eventing Alerts

```
wsman invoke -a SetEventFilterByInstanceIDs -h [idrac-ip] -P 443 -u [username] -p
[password] -N
root/dcim http://schemas.dmtf.org/wbem/wscim/1/cimschema/
2/root/dcim/DCIM_EFConfigurationService?SystemCreationClassName="DCIM_SPComputer
System",CreationClassName="DCIM_EFConfigurationService",SystemName="systemmc",Name=
"DCI
M:EFConfigurationService" -k
InstanceID=iDRAC.Embedded.1#RACEvtFilterCfgRoot#JCP 5 3 -k
```

Subscription Request

```
wsman subscribe 'http://schemas.dmtf.org/wbem/wscim/1/*' -x "SELECT * FROM DCIM_AlertIndication" -D 'http://schemas.dmtf.org/wbem/cql/1/dsp0202.pdf' -Z 'http://<event-sink ip>:<port>/eventsink' -h [idrac-ip] -P 443 -u [username] -p [password] -v -j utf-8 - y basic -R -o -m 256 -N root/dcim -c dummy -V -r 3000
```

RequestedNotification=6 -k RequestedAction=0 -V -v -R -o -m 256 -c dummy

Renew Request

```
wsman renew -i uuid:9e369e25-c894-1894-8016-335b54cb2b78 -h [idrac-ip] -P 443 -u
[username]
   -p [password] -v -j utf-8 -y basic -R -o -m 256 -N root/interop -c dummy -V -r
12000
```

Unsubscribe Request

```
wsman unsubscribe -i uuid: 9e369e25-c894-1894-8016-335b54cb2b78 -h [idrac-ip] -P 443 -u
```

[username] -p [password] -v -j utf-8 -y basic -R -o -m 256 -N root/interop -c dummy

 $-\nabla$

- Device Addition (*DCIM_AlertIndication*), this event is sent to all subscribers on every new device addition to the server. There will be one event of this type generated for every new device added.
