Executive summary

The number of server networking cards continues to grow at a rapid rate, as does the support for these cards from iDRAC with Lifecycle Controller. There are however, some limitations, and this brief document will help customers understand the differences in order to make the best choice to fit their needs.

This paper will cover network cards for both 12th generation of PowerEdge servers featuring iDRAC7 with Lifecycle Controller, as well as the 13th generation featuring iDRAC8 with Lifecycle Controller.

Glossary

iDRAC	The integrated Dell Remote Access Controller (iDRAC) with Lifecycle Controller (iDRAC7 or iDRAC8) with Lifecycle Controller is an embedded device in Dell PowerEdge servers that helps IT administrators manage, monitor, update and deploy Dell servers.
Flex Address	Slot based address management for the M1000e blade chassis
Form Factor	PCIe – card resides in a PCIe slot bNDC – blade select Network Daughter Card. rNDC – rack select Network Daughter Card. Mezz – Mezzanine card LOM – LAN on motherboard

Virtual Address Management (VAM) with Persistence Policy Virtual Address Management consists of two key features - IO Identity and Persistence Policy. Persistence Policy is a more flexible mechanism that determines whether the values persist after a reboot or not. It is designed to address several usage scenarios, namely:

- Persisting volatile settings (the virtual address attribute) through cold boot/ac power loss.
- Making settings volatile when current hardware persists them. This is particularly applicable to initiator and target settings, which are all persistent today, but it is desirable that an orchestration app can depend on these settings disappearing (being volatile) if the system experiences a AC power loss or a cold boot.

Introduction

iDRAC with Lifecycle Controller has the ability to configure and monitor network cards, and some HBA's. As Dell continues to develop new solutions with our partners, the list of supported devices grows, as well as the features within each card.

However, due to the timing of some cards, not all features are available. This can cause issues and may result in loss of productivity. To safeguard against this, the following table should be used to understand the features available for each card.

Legend –

- Green – Feature supported
- Red – Feature not supported
- N/A – Feature not available with this card
