# 1. Scope

The DCIM SystemQuickSync Profile describes the properties and interfaces for executing system management tasks related to the management of QuickSync/NFC devices within a system. The profile standardizes and aggregates the description for the QuickSync properties into a SystemQuickSync view representation as well as provides static methodology for the clients to query the SystemQuickSync views without substantial traversal of the model.

The Dell SystemQuickSync Profile is a component profile that contains the Dell specific implementation requirements for SystemQuickSync view.

DCIM\_SystemQuickSyncView shall be the Central Class.

Table 1 identifies profiles that are related to this profile.

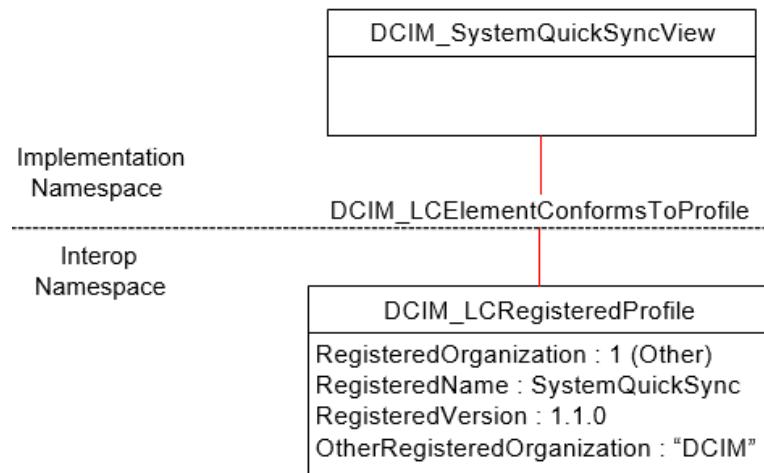

**Table 1.** Related Profiles

Profile Name	Organization	Version	Relationship
Profile Registration	DCIM	1.0	Reference

## 6. Description

The Dell SystemQuickSync Profile describes platform's QuickSync/NFC device. NFC information is represented by an instance of DCIM\_SystemQuickSyncView class.

Figure 1 details the class diagram of the Dell SystemQuickSync Profile.

**Figure 1. Class Diagram**

Figure 2 details typical Dell SystemQuickSync Profile implementation for a platform containing QuickSync/NFC devices. In order for client to discover the instrumentation's support of this profile, SystemQuickSyncProfile is instantiated in the Interop Namespace. SystemQuickSync Profile instance describes the information about the implemented profile: most importantly, the name and version of the profile and the organization name that produced the profile.

QuickSync1 is the SystemQuickSync view representing the QuickSync/NFC device in the Implementation Namespace. They are associated to the Interop namespace's SystemQuickSync Profile instance.
